Re: Revision of Part 15 of the Commission's Rules to Permit Unlicensed National Information Infrastructure (U-NI) Devices in the 5 GHz Band. **ET Docket No. 13-49**

Re: in Support of Petition for Reconsideration of WISPA.
Re: in Support of Petition for Reconsideration of Cambium Networks, Ltd.
Re: in Support of Petition for Reconsideration of Mimosa Networks.
Re: in Support of Petition for Reconsideration of JAB Wireless.

Dear Ms. Dortch,

InvisiMax Inc. is a WISP in Minnesota & North Dakota. We provide broadband service to 2,500 rural customers, in and around 44 small communities. They are rural unserved and underserved areas. In many of these communities we provide free service to local Fire departments, City offices, libraries and other public service entities. The change of Section 15.247 to section 15.407 will likely cause many of these communities to lose service. Using the current rules we are able to build out to very remote places. If the commission restricts our emissions limits in 15.407, customers and communities will be affected, not to mention the huge financial impact on our company and many others like us.

Under the current rules, *with Zero issues*, we service a large area around a US AIRFORCE BASE, near Grand Forks ND. We serve US Border Patrol offices. We supply tower space to US Customs, US Border Patrol, and Home Land Security. Many of these, in our area, will be impacted by the change in rules. It would simply not be economically feasible for us to service these areas. With the current rules, we are able to service these Communities with ZERO government broadband subsidies! The Current 5GHz rules are very important to these people, and it works.

I would like to thank the Commission for past support and for-sight, allowing frequencies for us to fill a need, economically and competitively providing service the rural communities we do. Businesses like ours are a huge economic driver for these rural areas.

I also thank you in advance, for your consideration of the Petition by Cambium Networks, requesting the Commission to reconsider the 5 GHz Band. ET Docket No. 13-49

Respectfully,

David L Giles, Pres.
InvisiMax, Inc.
